

Protect Your Home from Natural Weather Events

- **01.** Insulating your basement or crawl space from winter temperatures can protect against burst pipes and help lower heating bills.
- **02.** Install a dehumidifier to reduce humidity in the basement or crawl space throughout the year.
- **03.** Ensure your home's foundation is not cracked or damaged to keep water out in the humid summer months with a professional foundation inspection and repair.
- **04.** Install an interior drainage system and sump pump to protect against storm damage in the spring.
- **05.** Water lawns regularly and ensure proper drainage to reduce the effects of summer droughts and fall storms on a home's foundation.
- **06.** Regular lawn maintenance, trimming trees, and removing old or damaged ones protects homes from damaging storms.
